**PrinterLogic SaaS - Making Printer Deployment Easy**

When discussing Cloud Print Management with customers, we are constantly asked about the final print experience for the user, specifically in an environment with different printer manufacturers. Cloud solutions in the market today handle this challenge in multiple ways. Some present Universal Drivers, which will address most users but may present challenges for finishing, etc. Some will allow you to push out drivers, but it doesn't help with Hybrid Workers who may not always work in the same place when they go into the office. PrinterLogic SaaS presents multiple options to help make their solution easy for IT and the end-user to support that final print experience.

1. Has migration tools to help IT transition the existing print environment to the Cloud
2. Allows all print driver management from a centralized admin console
3. Provides easy driver deployment and driver update tools for IT, so the users are up to date on the latest drivers
4. Allows end-users access to a self-service printer installation portal so they can select the printer that is convenient for them
