Canon Kodak alaris

Canon DR-C360

Turn paper invoices into actionable digital data with the Canon DR-C360. Its 60 ppm/120 ipm scanning speed and 100-sheet ADF help AP teams quickly process batches of invoices, while advanced image processing helps produce clean, consistent images for OCR and data extraction. Barcode and 2D-code recognition can help automate invoice identification and routing, reducing manual handling and speeding the path from receipt to approval and payment.

SOFTWARE HIGHLIGHTS

opentext™

Modernize fax workflows with AI

Fax remains mission-critical across healthcare, financial services, insurance, and government—but manual sorting, data entry, and processing can slow teams down.

OpenText™ Fax Aviator™ brings AI directly into fax workflows, transforming static fax pages into actionable, structured information that flows seamlessly into the systems and processes your teams already use.
With powerful AI capabilities, Fax Aviator helps organizations:

- **Highlight:** Add sender and subject information.
- **Summarize:** Quickly highlight the most important information in lengthy faxes.

The result? **Less manual work, faster processing, and higher productivity**—without disrupting existing systems or compliance controls.
Built on the trusted OpenText Fax platform, Fax Aviator integrates with leading EMR/EHR, ERP, ECM, and CRM systems and offers cloud flexibility, enterprise-grade security, governance, and support for regulatory and data residency requirements.
