SOFTWARE HIGHLIGHTS

opentext™

Core Fax Aviator

Manually reviewing every incoming fax slows your team down. Adding **OpenText Core Fax Aviator** brings AI-assisted document intelligence to inbound fax workflows, helping users understand documents sooner and identify what needs attention first.

- **See key details at a glance:** Automatically display sender and subject information in the inbound fax list, with searchable metadata that can also be included in email notifications.
- **Get summaries on demand:** Request concise, AI-assisted overviews to quickly understand document content and determine next steps.
- **Keep shared queues organized:** Role-based delegation and custom, color-coded categories help teams manage access, prioritize faxes, and track work.
- **Support accountability:** Summary requests are recorded in the event log for auditability.

For healthcare, insurance, government, financial services, and other document-intensive teams, Core Fax Aviator helps reduce manual review and improve shared-queue productivity.
